For your personal safety, please pay attention to the following rules:

If you are not using the beacon for an extended period of time:

Remove the batteries from the battery compartment. Leaking batteries can cause irreparable damage.

Periodic functional test:

We recommend that you have your beacon checked at least every three years at our service center. If you would like to have a checked beacon at the start of season, we recommend that you have the functional test done out of season (June to September).

Repair

Barryvox beacons which do not operate properly (check always: batteries correctly inserted and fully-charged), have errors according to the "Problems and Solutions" section of the user's manual, fail in the group check procedure or have mechanical defects must be returned to one of the Barryvox service centers.

Please read as well the related sections of the user manual. The current version can be downloaded from www.barryvox.com

If you mail in a Barryvox, please proceed in the following way:

For every type of device, there is a repair order form, which you may obtain from us directly or download from our Internet site www.barryvox.com

Please fill in one form for each device that you are sending in. This makes our work easier and avoids unnecessary delays. The services, prices and terms of business can be found on the repair order form.

The warranty becomes **null and void** for beacons which have been opened by the customer or any unauthorized third party as well as for beacons which have been used with spare parts or accessories which are not original or are not recommended by the manufacturer.

When you receive the transceiver

Turn the Barryvox on and check if the self test passes without any errors. This is to ensure that it has not been damaged in transport.
